

Create order

Show a single Account if current User has access permissions to it.

URL : `/api/Order/CreateOrder`

Method : `POST`

Auth required : NONE

Permissions required : Anonymous

Data:

Property	Type	Validate	Description
Sender	ContactInfoViewModel	Required	

Success Response

Code : `200 OK`

Content example:

```
{
  "id": 345,
  "name": "Super Account",
  "enterprise": false,
  "url": "http://testserver/api/accounts/345/"
}
```

Error Responses

Condition : If Account does not exist with `id` of provided `pk` parameter.

Code : `404 NOT FOUND`

Content : `{}`

Or

Condition : If Account exists but Authorized User does not have required permissions.

Code : `403 FORBIDDEN`

Content :

```
{"detail": "You do not have permission to perform this action."}
```

Notes

There are security issues:

- This view allows existing users to test for existence of accounts that exist but that they do not have access to.
- Account IDs are sequential so an authorized user can count all the Accounts on the system.
